The Academy is where physician psychoanalysts and psychodynamic psychiatrists: discover a forum for exchange of ideas; find a voice within the APA to advocate for psychodynamic understanding in the evaluation and treatment of patients; take a leadership role in promoting the importance of psychodynamic training in residency and medical education.
Message from the Program Co-Chairs: For many generations, the brain and the mind have had a dual and separate existence in the field of psychiatry. As our discoveries in neuroscience are increasing with the advancement of technology, our ability to relate these discoveries to psychodynamics is improving. We have an opportunity at the present time through the integration of neurobiology and psychodynamics to illustrate the pivotal role of psychoanalytic and psychodynamic theory. Attendees will appreciate how neuroscience can help us better understand and apply psychoanalytic concepts to the care of our patients. The meeting will teach how we can best integrate the brain and the mind.

Program: Our goal is to lead the evolution of the field of Psychiatry through the integration of neurobiology with psychoanalytic theory and psychodynamic concepts. As our field is struggling with the lack of curative medications and other biological interventions, it is once again turning toward the mind to understand how to help our patients. The next step in the evolution of our field is the integration of neurobiology with psychodynamics to better understand how to apply these concepts to our patients in the most effective manner. The program will highlight ways in which applied neurobiology to psychodynamics can positively influence the care of our patients, psychotherapy research, and the future of our field.

The American Academy of Psychoanalysis and Dynamic Psychiatry is an organization that works to translate the applicability of the concepts of psychoanalysis and psychodynamics into the fields of neurobiology, psychopharmacology, cross-cultural psychiatry, creativity, media and the arts, and other related disciplines. We are affiliated with the American Psychiatric Association.

Conference Learning Objectives: This meeting has been designated to meet the following professional practice gaps and the needs derived from those gaps:

Gap #1: Improving treatment of patients by:
A. Attaining sufficient knowledge of psychodynamic principles and the ability to apply this knowledge.
B. Enhancing the ability to integrate dynamic principles, psychopharmacology, and neuroscience in clinical practice.

Needs derived from the gaps above:
A. To learn about development of therapeutic alliances; transference and countertransference; the handling of challenging situations; and practical applications of psychoanalytic theories.
B. To learn about complex pathologies, neuroscientific advances, pharmacological treatments, and medical conditions and their implications/ramifications for psychodynamic psychotherapy.
Enhancing training of residents and early career psychiatrists

Needs derived from this gap:
A. To learn new ways of engaging residents and training them in the complex theories and techniques of psychodynamic psychotherapy.
B. To foster learning of complex theories and techniques of psychodynamic psychotherapy by early career psychiatrists.

All presentations must address at least one of the specified needs.

The Academy expects the results of its CME program to be improvement in competence or performance. Definitions: “Competence” refers to knowing how to do something; and “Performance” is what a psychiatrist would do in practice if given the opportunity.

Target Audience: Those interested in the recent developments and clinical application of psychodynamic approaches: a) psychoanalysts, psychiatrists, child and adolescent psychiatrists, other physicians, residents and fellows; b) psychologists, interns and students of psychology; c) social workers, students of social work; d) allied professionals and students.

The American Academy of Psychoanalysis and Dynamic Psychiatry is accredited by the Accreditation Council for Continuing Medical Education (ACCME) to provide continuing medical education for physicians.

The American Academy of Psychoanalysis and Dynamic Psychiatry designates this live activity for a maximum of 21.0 AMA PRA Category 1 Credits™. Physicians should claim only the credit commensurate with the extent of their participation in the activity.

The American Academy of Psychoanalysis and Dynamic Psychiatry acknowledges the generous support of the Alexandra and Martin Symonds Foundation to its educational programs.
